Tools: Git, GitHub, GitLab, BitBucket, npm, Chrome Developer Tools, Postman, Android Studio, iOS Simulator

## Work Experience

---

### Frontend Developer

February 2022 - Present

**Mindera** | Custom Software Development

- Working in an agile team as a front-end developer for a leading global sports betting platform, I focus on delivering features, conducting A/B testing, and resolving product issues.
- Worked with designers to build responsive components and visually appealing user interfaces that meet the client design aspect using JavaScript, React.js, and LESS to ensure cross-browser compatibility and optimal performance.
- Developed a personalized user section that customizes itself based on how each individual interacts on the platform. By tapping into API data, I ensure users see their favorite sports prominently displayed, making their experience more tailored and user-friendly.
- Implemented dynamically generated buttons linking fantasy football users directly to live NFL betting options, enhancing cross-platform user experience. As a frontend developer in an agile team for a leading global sports betting platform, I focus on delivering features, conducting A/B testing, and resolving product issues.
- Boosted user engagement by making sure trending sports events were highlighted, guiding users to popular content.

### Frontend Developer

June 2021 – January 2022

**Overweight Financials**

- Worked with another partner developer building a budgeting and investment portfolio management website.
- The frontend is a single-page application design using React and Material-UI with the goal of having a very fluid, customizable and modern feel.
- Created and deployed a coming soon page, as well as a Node Express backend email service that handles communication with the user base.
- Integrated third-party APIs such as SendGrid to enhance communication and functionality.

### Intern Frontend Developer

May 2021- Jul 2021

**Chim Media** | Digital Agency Company

- Responsible for building and developing web applications and mocking website templates.
- Leveraged React to architect SPA templates, based on atomic reusable components as a design principle to create scalable, performant front-end applications with a pure javascript library.

## Education

---

### freeCodeCamp

Frontend Development Libraries

Responsive Web Design

JavaScript Algorithm and Data structures

**Kasetsart University, Bangkok, Thailand**

Bachelor of Political Science in International Relations
