Work Experience

Frontend Developer **Overweight Financials** | [Website](#) June 2021 – Present

- Working with another partner developer building a budgeting and investment portfolio management website that will act as a wrapper around a user's financial data transforming it into actionable information in a completely automated design.
- The frontend is a single-page application design using React and Material-UI with the goal of having a very fluid, customizable and modern feel.
- Created and deployed a coming soon page, as well as a Node Express backend email service that handles communication with our user base.
- Integrating third party APIs such as SendGrid and Plaid.
- Leveraging Google Firebase for authentication and authorization. This also allows us to pass a secure JWT token to our backend app, allowing for an additional layer of security.

Intern Frontend Developer **Chim Media** | Digital Agency Company May 2021- Jul 2021

- Responsible for building and developing web applications and mocking website templates.
- Leveraged React to architect SPA templates, based on atomic reusable components as a design principle to create scalable, performant front-end applications with a pure javascript library.

Personal Projects

Portfolio [GitHub](#) | [Website](#)

- A responsive portfolio website that ties together my different projects in a single cohesive design to help demonstrate my skills as a developer.

Random Quote Machine [GitHub](#) | [Website](#)

- Fetches a new random quote with the click of a button by leveraging data from an external API.
- Implemented Twitter and Tumblr buttons that allow users to share the quote on their account.

Todo List [GitHub](#) | [Website](#)

- A todo list first built with Javascript and then converted to TypeScript for additional experience.
- Allows users to add, edit, delete and mark todo list items as complete.

Travel Form [GitHub](#) | [Website](#)

- Created a responsive UI page for a survey travel form, using Semantic HTML to help make the page more accessible and improve SEO.

Education

freeCodeCamp/online courses 2019 – Present

Front End Development Libraries

Responsive Web Design

JavaScript Algorithm and Data Structures

Bachelor of Political Science in International Relations | Kasetsart University Graduation: May 2014

Skills

(Proficient): JavaScript • React • HTML • CSS • Responsive UI Design • API

(Familiar): TypeScript • Material UI • Bootstrap • Node Express.js • Postgres • Sendgrid • Figma

(Tool): Git • GitHub • GitLab • npm • Chrome Developer Tools • Visual Studio Code • Postman
